

## Repaso Numpy Operaciones con arreglos

**Optimización** 

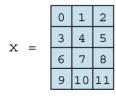

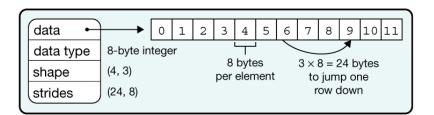

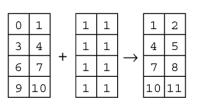

### Resumen de Numpy

#### a Data structure

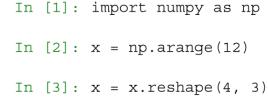

#### **d** Vectorization

### g Example

In [4]: x

In [5]: np.mean(x, axis=0)

Out[5]: array([4.5, 5.5, 6.5])

In [6]: x = x - np.mean(x, axis=0)

[4.5, 4.5, 4.5]

### **b** Indexing (view)

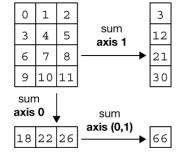

### e Broadcasting

0		1	2		0	0	
3					3	6	
6	X			$\rightarrow$	6	12	
9					9	18	

### c Indexing (copy)

$$x[1,2] \rightarrow 5 \quad \text{with scalars} \qquad x[x > 9] \rightarrow \boxed{10} \, \boxed{11} \quad \text{with masks}$$
 
$$x\left[\begin{array}{c} 0 & 1 \\ 1 & 2 \end{array}\right] \rightarrow \left[x[0,1], x[1,2]\right] \rightarrow \boxed{15} \quad \text{with arrays}$$
 
$$x\left[\begin{array}{c} 1 & 1 & 0 \\ 2 & 1 & 2 \end{array}\right] \rightarrow x\left[\begin{array}{c} 1 & 1 & 0 \\ 2 & 2 & 1 \end{array}\right] \rightarrow \left[\begin{array}{c} 4 & 3 \\ 7 & 6 \end{array}\right] \quad \text{with arrays}$$
 with broadcasting

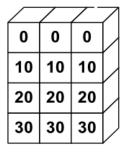

### f Reduction

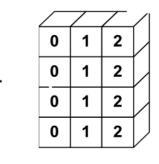

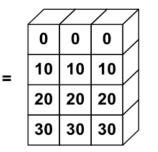

## **Operaciones con arreglos**

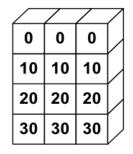

Toda las operaciones con arreglos son element-wise (elemento a elemento), broadcasting

	$\overline{}$	$\overline{Z}$	
0	1	2:	И
0	1	2	И
0	1	2	И
0	1	2	

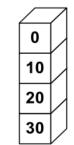

$\angle$	$\angle$		
0	0	0	И
10	10	10	
20	20	20	
30	30	30	

$ \angle $	$\overline{}$	$\overline{}$	$\nearrow$
0	1	2	И
0	1	2	
0	1	2	
0	1	2	

	$\overline{}$	$\overline{}$	_
0	1	2	
10	11	12	
20	21	22	
30	31	32	

	0	0	0	
=	10	10	10	
_	20	20	20	
	30	30	30

### **Broadcasting**

=

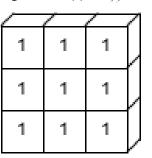

np.arange(3) + 5

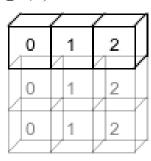

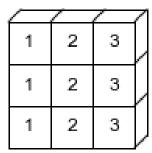

5 6 7

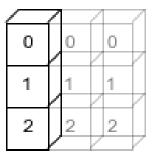

np.ones((3,3)) + np.arange(3)

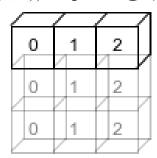

np. arange(3). reshape((3,1)) + np. arange(3)

$\overline{}$			/
0	1	2	/
1	2	3	/
2	3	4	

## Slicing – Cortes o selección de submatrices

## Índices matriz 4x3 (fila, columna)

(0,0)	(0,1)	(0,2)
(1,0)	(1,1)	(1,2)
(2,0)	(2,1)	(2,2)
(3,0)	(3,1)	(3,2)

$$X[0,1] = 2$$
  
 $X[1,:] = [4,5,6]$   
 $X[1:,1:] = [[5,6],[8,9],[11,12]]$   
 $X[::2,:] = [[1,2,3],[7,8,9]]$   
 $X[[0,1,2],[0,1,2]] = [1,5,9]$ 

### Valores X

1	2	3
4	5	6
7	8	9
10	11	12

```
np.min(X) \rightarrow 1
np.argmin(X) \rightarrow 0
np.unravel_index(x.argmin(), x.shape)\rightarrow [0,0]
```

### Creación de arreglos aleatorias

2D array

1D array

5 6 7

axis 1

2.0 3.5 4

9 7.0 6

3D array

axis 2

axis 1

axis 0

## Creación de arreglos aleatorias

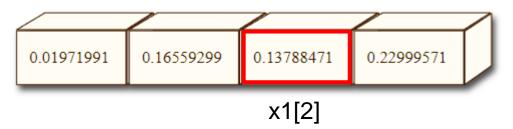

x2[0,2]

Forma general:

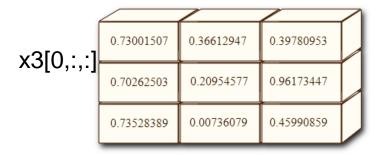

np.random.rand(d1,d2,...,dn)

La función rand genera valores flotantes entre 0 y 1.

x1 = np.random.rand(4)

x3 = np.random.rand(3,3,3)

53115689 0.66221851 0.76211485 0.0153707 0.63901732 0.55917391 0.00194568 0.61058225 0.50276787

x3[1,:,:] 0.06066419 0.99818156 0.59636756 x3[2,1,0] 0.38082679 0.13096021 0.56670893 x3[2,:,:]

0.26456186

0.81937033

x2 = np.random.rand(3,3)

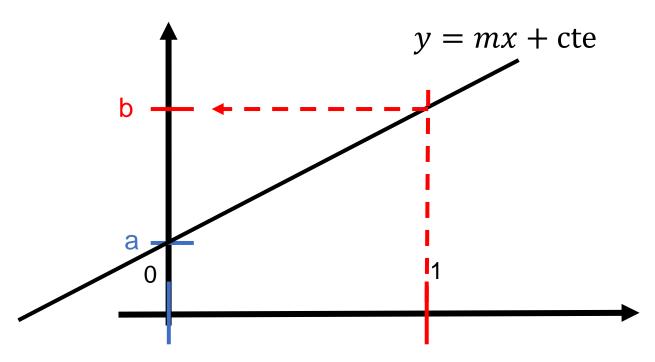

0.97350538	0.99532408	0.38414218	-
0.58257071	0.29752654	0.93620278	
0.22874881	0.0578009	0.18112102	

0.96584319

## Creación de arreglos aleatorias

Si la función rand genera valores flotantes entre 0 y 1, que debo hacer para generar valores entre a y b?

$$x = \text{rand}()$$
  
 $y = mx + \text{cte}$   
Sí  $x = 0$ :  $y = \text{cte} = a$   
Sí  $x = 1$ :  $y = m(1) + a = b$   
 $m = b - a$   
 $y = (b - a)\text{rand}() + a$ 

Ejemplo: Generar un valor aleatorio entre -1 y 1?  $y = (1 - (-1)) \operatorname{rand}() + (-1) = 2 \operatorname{rand}() - 1$ 

Ejercicio: Generar un vector aleatorio de n dimensiones con valores entre -3 y 5?

Ejercicio: Generar una matriz aleatoria de NxP donde cada columna tenga un limite inferior y

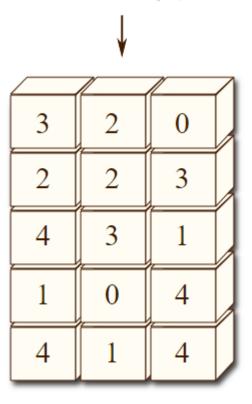

un limite superior?

### Comparaciones relacionales

```
import numpy as np
a = np.array([1, 3, 7, 9, 10, 13, 14, 17,
29]) print("Arreglo Original:",a)
result = np.where(np.logical_and(a>=7, a<=20))
print("\nElementos en el rango: posicion del indice")
print(result)
result2 = np.where((a>=7) & (a<=20))
print("\nElementos en el rango: posicion del indice ")
print(result2)
                                                        Index position
                           (a>=7)
 False
        False
                            True
                                  True
                                         True
                                               True
                                                      True
               True
                     True
                           (a <= 20)
                            True
                                                      False
        True
               True
                     True
                                  True
                                         True
                                               True
  True
 False
        False
               True
                     True
                            True
                                  True
